

Our Engineers are specialists in the development and design of the construction plans and infrastructure for a wide variety of telecommunications projects. Phase 3 engineers and drafting technicians can quickly turn around any trenching, directional boring, or utility vault placement project from the initial field walkout stage to the provision of system as-builts.

Over most of the last decade, our experienced technicians have successfully performed consistent emergency restoration work on fiber optics installations all over the west coast, including work for Nextel, Verizon, Time Warner Telecom, and the San Francisco Bay Area Rapid Transit (BART) trains.

State-of-the-art workstations and Computer Aided Drafting (CAD) software enable us to quickly and efficiently fulfill all of your engineering requirements.
